

SNAPLOCK, STANDING & PITTSBURGH SEAM MACHINE MODEL: LC-10PS

This machine can have two sets of rolls installed at a time .This allows having a set of Pittsburgh Rolls on one side and a set of Standing Seam Rolls on the other side. The same could be done with a set of Snap Lock Rolls on one side and Cam Standing Rolls on the other (this machine includes a total of 5 sets of rolls.). The rolls are made from the highest quality case-hardened special steel .For additional safety the sheet support tables can be adjusted to the different run heights of the right and left roller set. Roller shafts, housed in axial and radial roller bearings, provide high-quality profiles. A wide gear box supports the roller shafts in the best possible way. The high-quality gear-driven motor ensures smooth and quiet operation. It delivers the drive power directly to rolls without transfer gears or belt drives.

STANDARD SPECIFICATIONS:

- All profiles is a 9 station machine
- 3.7KW 1450 RPM 220/440V 60HZ 3 phase motor
- Speed 10 meters per minute approx.
- Thickness : 0.45 – 1.00mm
- Approximate weight : 430kg
- Machine length : 1510mm
- Machine width : 630mm
- Machine height : 1000
- Working height : 820mm
